HSC Board, Maharastra
2011-2012

Secondary School Certificate (10th) -80%
SSC Board, Maharastra
2009-2010

PERSONAL PROJECTS

1. Boom-Music Player
   - Created this Android application for my final year college project.Now it's on the play store with more than 50k downloads as of now and I have made it open source on GitHub.

2. Quotes-Instagram Posts
   - Created this application for automation of Instagram posts. I automated the posting of the images using accessibility features of the Android. Just upload the image and the text to be written on the image to firebase database once you open the app it fetches the image and text creates the post which can be shared on Instagram. Saves a lot of time.

3. Bell-Ringtone Maker

- Created this app using Ringdroid library developed by google, didn't do much work here just updated the UI to material design. This app can cut any audio file into pieces and then you can set them as a ringtone. It is open source on Github.

4. Easy Touch-Assistive touch like iPhone

- This is an android app which gives you easy access to instant features of the Android app, like taking screenshots with one click, locking the phone, opening apps, favorites, shortcuts from settings etc. Basically, it's a replica of iPhone's assistive touch app.

5. Pinterest Menu-Library

- A popup menu library inspired by Pinterest Menu uses concepts like custom views, custom drawing over canvas, styleable and versioning managed by JitPack.

6. www.Reyanshmishra.com-Portfolio

This is just a portfolio showcasing my talents and works which I have done so far. Have created this website using angular and hosted it on firebase.

ACHIEVEMENTS

1. Optimized Data insertion

- Optimized the data insertion time in SQLite from 1.20 minutes to 20 seconds, when I was working with Tacto Infomedia Pvt. Ltd. Though it was not a big achievement being a fresher and optimizing the important part of the UX seems like an achievement.
